

Dihydropyrimidines and Uses Thereof
Abstract of the Disclosure

5 This invention is directed to dihydropyrimidine compounds
which are selective antagonists for human α_{1A} receptors.
This invention is also related to uses of these compounds
for lowering intraocular pressure, inhibiting cholesterol
10 synthesis, relaxing lower urinary tract tissue, the
treatment of benign prostatic hyperplasia, impotency,
cardiac arrhythmia and for the treatment of any disease
where the antagonism of the α_{1A} receptor may be useful.
The invention further provides a pharmaceutical
composition comprising a therapeutically effective amount
15 of the above-defined compounds and a pharmaceutically
acceptable carrier.
